Technology, Hauz Khas, New Delhi 110016, India

Abstract. It was shown earlier that during quantum  
mechanical tunnelling, a microscopic particle has a  
distributed probability of emission about its original  
energy and is not constrained to be field-emitted only at its  
initial energy.

Abstract. A suggestion to experimentally measure the electron tunnelling time by observing the tunnelling current cut-off as a function of the magnetic field intensity in semiconductor pn tunnel junctions, when they are placed in a crossed electric and magnetic field configuration, has been made in this paper.
