Economic analysis of health care interventions

Economic analysis of health care interventions. Konski A(1). Although the percentage of GDP may not concern providers of health care products or services, it has an affect on the rest of the economy. Spending on health care by employers or patients increases the cost of the products produced, making goods produced here in the United States less attractive to world markets in the age of

A New Perspective on Economic Analysis in Health Care

role for the state in the provision and financing of health services. 1 While it is not difficult to find critics of economic analysis in health care, it is worth making the distinction between those criticisms which are about the role of the market in health care (or what some critics in Australia refer to as economic rationalism) and those which, more fundamentally, are about the

Applying Economic Principles to Health Care

which are beyond the control of the health-care provider. Economic analysis is based on the fundamental notion of efficient use of available resources. Two basic points are 1) economics is about resource allocation, and 2) efficiency in resource use (getting the most from available resources) in health care can be understood by identifying production functions representing health-care services

<http://best-anti-aging.de/Applying-Economic-Principles-to-Health-Care.pdf>

Theory and methods of economic evaluation of health care

If economic evaluations of health care programmes are not going to have any impact on decisions about the allocation of resources to health care programmes, this is a meaningless activity. In this

<http://best-anti-aging.de/Theory-and-methods-of-economic-evaluation-of-health-care--.pdf>

Economic evaluation of implementation strategies in health

For example, in a Dutch study of the implementation of intensified glycaemic control in type 2 diabetes, the comparison of audit and feedback to primary care providers versus usual care was based on an economic model . The model permitted establishing estimates of incremental cost per QALY ratios by linking behavior change to health-related outcomes using a simulation of experiments.
