De Carvalho Filho (2008), also, showed how household income determines child labor and school attendance using a social security reform in Brazil as a source of exogenous variation in household

Household Income As A Determinant of Child Labor and ...

This paper studies the effects of household income on labor participation and school enrollment of children aged 10 to 14 in Brazil using a social security reform as a source of exogenous variation in household income. Estimates imply that the gap between actual and full school enrollment was reduced by 20 percent for girls living in the same household as an elderly benefiting from the reform. Girls' labor participation rates reduced with increased benefit income, but only when benefits were
